

# Advanced Analytics

## Built for your Process Engineers

We're bridging the gap between process engineers and data science. Giving teams the ability to collaborate in ways they never thought possible.

Enabling data to speak to Process Engineers

## Connecting with Data

Already have your data in a historian? Don't fret, our platform has a direct connection to OSI PI and can also connect with other data systems. EFT's SaaS platform positions the data into the hands of the process engineer. We're not talking about simple linear analysis, this is process engineering analysis on the fly. Engineers are empowered to unlock the solutions they've been searching for.

## Collaboration

Applying analytics is a group effort, and we're ready to join the team. Process engineers and Analytics teams have never experienced this type of collaboration before. EFT's Advanced Analytics equip process engineers to uncover new insights from your data. We're positioning these teams to deliver the solutions necessary to maximize plant efficiencies.

## Successful Partnership

EFT's Advanced Analytics platform empowers the user to discover solutions that were previously hidden. Our quick connection to multiple data systems allows for easy analysis. Already working on implementing Advanced Analytics? No problem, our software is the tool you've been needing to take your analytics to the next level. What are you waiting for? Insights are ready.

- Optimization
- Root Cause Analysis
- Asset Uptime

"As a process engineer without a data science background, I'm able to gain insights on my processes that I've never been able to see before."

-Plant Process Engineer
