

EFT PI INTEGRATOR

QUICK CONNECTION

With the integration of OSI PI and EFT's platform, the user won't require a second step to pull data out of their system. It's easy and simple to use. You'll wonder how you ever lived without it.

BUILD MODELS FASTER

We're decreasing the time needed to import data sets, from weeks to minutes. This integration allows you to iterate through models that much faster. We're giving you the power, allowing you to maximize your time and model production speed.

MAXIMIZE KNOWLEDGE

This integration eliminates the need for individuals to go back to their PI Administrators or IT people to get data controls. Process engineers are maximizing their knowledge and building models within minutes of importing their data.

WHAT DOES THIS MEAN FOR YOU?

EFT PI Integrator gives users the ability to connect to their Asset Framework PI server so they can import their PI Tags more efficiently. The user has the ability to create data sets and build models unlike ever before. This function drastically decreases the amount of time needed to import data from the PI system. With this integration, data has the capability of being analyzed within minutes.

EFT ANALYTICS

Everything we do is centered around producing data informed actions through industrial analytics. We believe your data holds the answers to the outcomes you are working to achieve. We're giving data a voice, and allowing you to be a data driven organization.
