

EFT DATA EXTRACTOR

For OSIsoft® PI System®

Quick Connection

Our Cortex software has the capability of extracting data from your OSIsoft® PI System® within minutes. Now, pulling data out of your system is easier and simpler than ever. You'll wonder how you ever lived without it.

Build Models Faster

We're decreasing the time needed to import data sets from weeks to minutes. This extractor allows you to iterate through models much faster. We're giving you the power, allowing you to maximize your time and model production speed.

Maximize Knowledge

This extractor eliminates the need for individuals to go back to their PI Administrators or IT people to get data controls. Process engineers are maximizing their knowledge and building models within minutes of importing their data.

What does this mean for you?

EFT's Data Extractor gives you the ability to connect to your Asset Framework PI server so you can import your PI System tags more efficiently. With this new tool, you have the ability to import data, create data sets, build models and analyze your data unlike ever before.

EFT Analytics

Everything we do is centered around producing data-informed actions through industrial analytics. We believe your data holds the answers to the outcomes you're working to achieve. We're giving your data a voice and allowing you to be a data-driven organization.
